

Fire Door Inspection & Remedial Works

Your fire doors form a vital part of your fire protection. Kings Fire Ltd have the ability to carry out fire door inspections together with any required remedial actions.

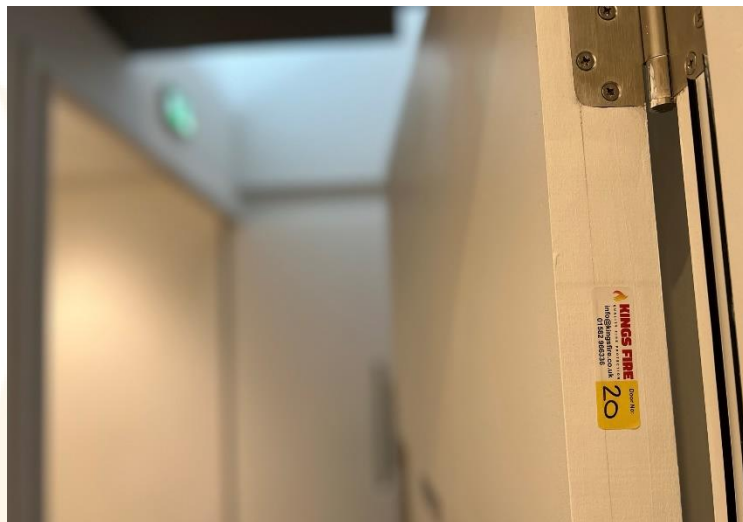

Fire door inspection

Fire Doors are vital for the safety of everyone in a building. They also assist with reduction fire & smoke spreading throughout the premises. In order to comply with the Regulatory (Fire Safety) Order 2005 your fire doors should be checked for conformity.

BS9999 recommends six monthly inspections and includes guidance on some of the main inspection criteria. You are responsible for ensuring an adequate inspection and maintenance routine is in place. We would advise that you consult your fire risk assessment for guidance.

Depending on the type of premises you are responsible for and who occupies it will influence the frequency of fire door inspections. Some premises, such as schools, hospitals & hotels, are subject to heavy traffic and the doors have a hard time often being subject to repeated misuse.

When we carry out your fire door inspection, we compile a detailed report on each door which shows if the door complies and also highlights any areas which require attention. This report is sent to you electronically after the inspection has been carried out.

Fire door repairs and replacement

After your fire door inspection has taken place, we are able to carry out repairs where possible to fire door closers, Intumescent strip, Smoke seals, Fire door hinges or anything else door related.

Replacements and upgrades of non-compliant fire doors including final fire exit doors. We ensure that we use certified fire doors from approved manufacturers and our network of professional installers are 3rd party accredited.

We can also supply and install metal fire exit doors for increased security.
