

Ancillary Fire Protection Equipment

Ancillary fire protection equipment forms a vital part of your overall fire safety. We supply a comprehensive range of ancillary equipment suitable for a range of applications. For a more detailed description of some of our more popular products, see below

Fire blankets

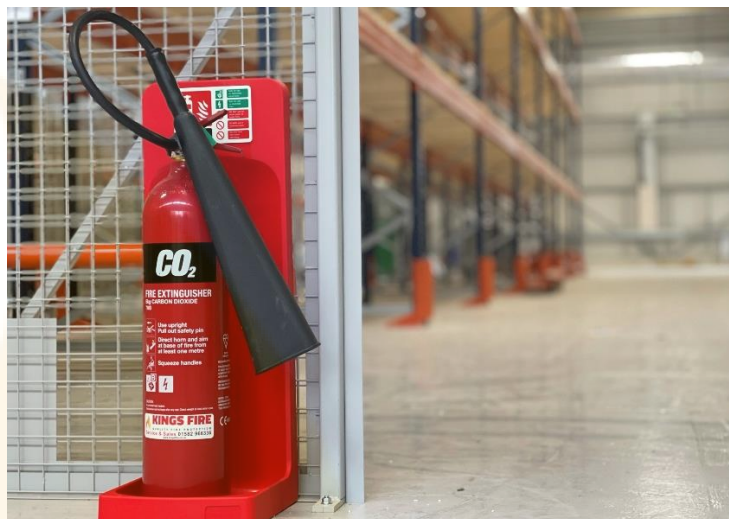

A fire blanket is an important addition to certain areas of your premises. They are made of fire resistant materials and designed to extinguish small fires or to place around a person whose clothes have caught fire. Fire blankets should be placed in areas such as kitchens where cooking pans or fryers are used. You can also add fire blankets in welding bays as additional protection. Our fire blankets are Kite marked and certified to BSEN 1869:1997. We have a range of sizes available to suite different sizes of risk

PVC fire equipment covers

PVC equipment covers are a requirement in BS5306-8 for preventing misuse & vandalism. Covers are also used for the protection of the extinguisher from dusty environments. Our covers have Velcro fastening for easy removal and red colouring making them easily identifiable. They have a window incorporated for identification of the extinguisher type and viewing of pressure gauge, which assists you during monthly checks.

Fire extinguisher stands

In some areas it is not possible to wall mount a fire extinguisher for various reasons. In this scenario Extinguisher stands are the solution to ensure you comply with British standards. Our extinguisher stands are manufactured from toughened plastic and available in a range of colours to suite your environment. We also provide tubular stands in chrome, gold and antique copper to match our Contempo range of Extinguishers.

Fire point trolleys

Fire point trolleys are especially useful on construction sites, forecourts or other large areas where it's not practical to fix or place stands. They can also be fitted with battery operated fire alarms.

Site Alarms / Rotary Bells

There are some instances where portable alarms are a requirement. We can provide Howler type alarm units which are battery operated and can be linked wirelessly. Traditional rotary bells are also available to be fitted to trolleys or walls.

Other ancillary products available include:

- Document cabinets/holders
- Transport brackets
- Protection boxes and cabinets
- Flame retardant sheets / Sprays
- Welding drapes
- Emergency spill kits
