

Fire Safety Signs

Kings Fire supply and install fire safety signs covering Emergency escape routes, location and identification of firefighting equipment, fire action instructions and other Important signs expressing prohibition, warnings and Mandatory information.

Our fire safety sign services include:

Premises Surveys

We can visit any premises no matter how big or small and carry out site surveys for fire safety signage, Hazard warning and prohibition signs. We carry out our surveys to the current British Standards; Using distance measurements to ensure the correct size of signs. We ensure that you are comfortable with the locations prior to installation.

All of our surveys and quotations are carried out free of charge and our signage costs include fitting.

Supply

We can replace old non-conforming signage any time we visit your premises to ensure you are compliant with legislation or simply supply signage as and when required. In the event you have your own team of qualified employees who maintain your equipment we can supply you with a huge selection of signage to ensure you have the correct signs for your premises.

Installation

Following your survey and quote acceptance we will carry out the signage installation. We agree all of the sign locations prior to the installation, which avoids complications.

We mainly supply rigid plastic signs, which are fitted using silicone. In the event you decorate any areas in the future, the signs can then be removed from the wall and re-fitted. If vinyl type signs were originally installed this would not be possible. Our signage pricing includes fitting so there are no hidden surprises.

Bespoke Sign Service

Kings Fire uses one of the UK's leading suppliers of signage. We can supply signage that is bespoke to your business showing logos or company specific information. Anything you want placing on a sign we can deliver.
